

## National Mild Drug Residue Demo (Sandbox) version of Web Based Reporting

A demonstration version of the application is set up and waiting for you to try! Even if you are signed up and ready to begin doing your monthly reporting take some time to look over the possibilities.

There are many features to allow reporters to control and share access to the system within their organization. No programs need to be installed or maintained. If you have a web browser with Java enabled and the Adobe viewer you are ready to begin.

There are two ways your organization can be configured, either as a lone reporter or as a central reporter that collects data from other regions or industrial sites. The key word we use is groups. If you collect data from regions and/or industrial sites and want then to enter their reports directly you would be a central reporter or one who uses groups. Rather than go into a lengthy explanation we have configured the demo area so you can log in as the different types of reporters and even as the different types of users (administrator, data entry or view only) to **see** how it works.

The password for all of the logins listed below is **demo**.

An Organization called **statenogroup** is setup and has these 3 logins:

admin@statenogroup  
dataentry@statenogroup  
viewonly@statenogroup

An Organization called **statewithgroup** is setup and has these 9 logins:

**Top level**, can see all information and the administrator is responsible for submitting the data to GLH.

adminall@statewithgroup  
dataall@statewithgroup  
viewall@statewithgroup

### **Group, IndustryReporter**

indadmin@statewithgroup  
inddata@statewithgroup  
indview@statewithgroup

### **Group, RegulatoryReporter**

regadmin@statewithgroup  
regdata@statewithgroup  
regview@statewithgroup

These logins are for testing purposes only. Please practice entering reports, read over the help information, and ask any questions you may have of any of the support team listed on the Support menu option within the application.

Please note that edit, delete and change of passwords for these 12 logins is disabled. You may add new people and you will be allowed to edit those passwords.

Again this data is never used as part of the actual database, it is for demonstration and training purposes only.
